

SLK CONSTRUCTION

Scott and Katie of SLK Construction are proud to announce their latest collaboration project, which aims to revolutionise the way affordable homes are built in the historic town of Dunoon, Argyll and Bute, Scotland: Scott's home town.

The project is an innovative and sustainable approach to building new homes that are sympathetic to the local community and environment, whilst also being affordable.

In recent years, the UK's home-building industry has become increasingly consolidated, with the majority of new homes being delivered by just five large companies.

This has made it difficult for smaller enterprises to break into the market and explore alternative ways of building homes.

However, our new collaboration between multinational and multiple award-winning construction professionals is aiming to demonstrate that smaller, independent players still have an important role to play in the sector.

The project in Dunoon involves the purchase of an old empty property that was previously run down and overgrown, with the vision to bring it back to life as 5 affordable homes for the local community.

This approach not only provides much-needed affordable housing but also reduces the environmental impact of the construction industry, which typically involves demolishing old buildings and consuming raw materials.

The purchase is complete, and the project has already begun, with furnishings cleared, ground preparation underway, and design elements in progress. Early-stage design and environmental impact assessments are complete, and the local authority is showing support for the project.

This innovative approach to building sustainable and affordable homes is desperately needed in the UK, where there are a significant number of empty homes that could be renovated to achieve this goal.

We hope our project in Dunoon will serve as a shining example of how collaboration and innovation can bring old properties back to life, provide affordable homes for local communities, boost local economic growth and limit the environmental impact of the construction.

Our goal is sustainable, affordable home building, demonstrating that smaller, independent players can still make a significant contribution to the sector.

Our latest project in Dunoon is an exciting development in the home-building industry, and it paves the way for future sustainable projects that can be replicated in other towns and cities throughout the UK.
